

Exclusive offer

*Penetration  
tests: What  
they are and  
why you  
need them.*

**DYNAMIC**   
BUSINESS TECHNOLOGIES

*What is your cybersecurity posture?  
Can your business withstand a cyber attack?  
How are you protecting your sensitive data?  
Are your passwords crackable?*

# *What is a Pen Test?*

- *An internal Pen Test is designed to test the strength of your systems and your staff.*
- *It provides a comprehensive review of where your cybersecurity is today.*
- *Identifies if your team is using stable, repeated or trackable passwords.*
- *Determine where sensitive data is stored and ensure it is being guarded.*
- *And more!*

# How a Pen Test works

- 1 Click on an executable  
*Simulating what happens when a link in an email is clicked*
- 2 Run the executable once  
*This takes between 5 minutes and an hour. Up to 2.5 hours on older machines. Go about your normal routine as it runs.*
- 3 Third Party will analyse your results  
*We will present our findings as to what a hacker would find on your network.*

# *Why conduct a Pen test?*

*Identifies Risks: Detects vulnerabilities and potential threats in your systems.*

*Evaluates Controls: Assesses the effectiveness of existing security measures and controls.*

*Identifies how much of a risk your staff are to your cybersecurity (How well trained are they?).*

*Provides actionable insights to enhance your cybersecurity posture.*

*If you are not protecting your business you  
are not protecting your clients.*

*The cost of not investing in cybersecurity  
outweighs the cost of investing in it.*

Our offer

# *What we can do.*

*Exclusive Offer: FREE Pen Test*

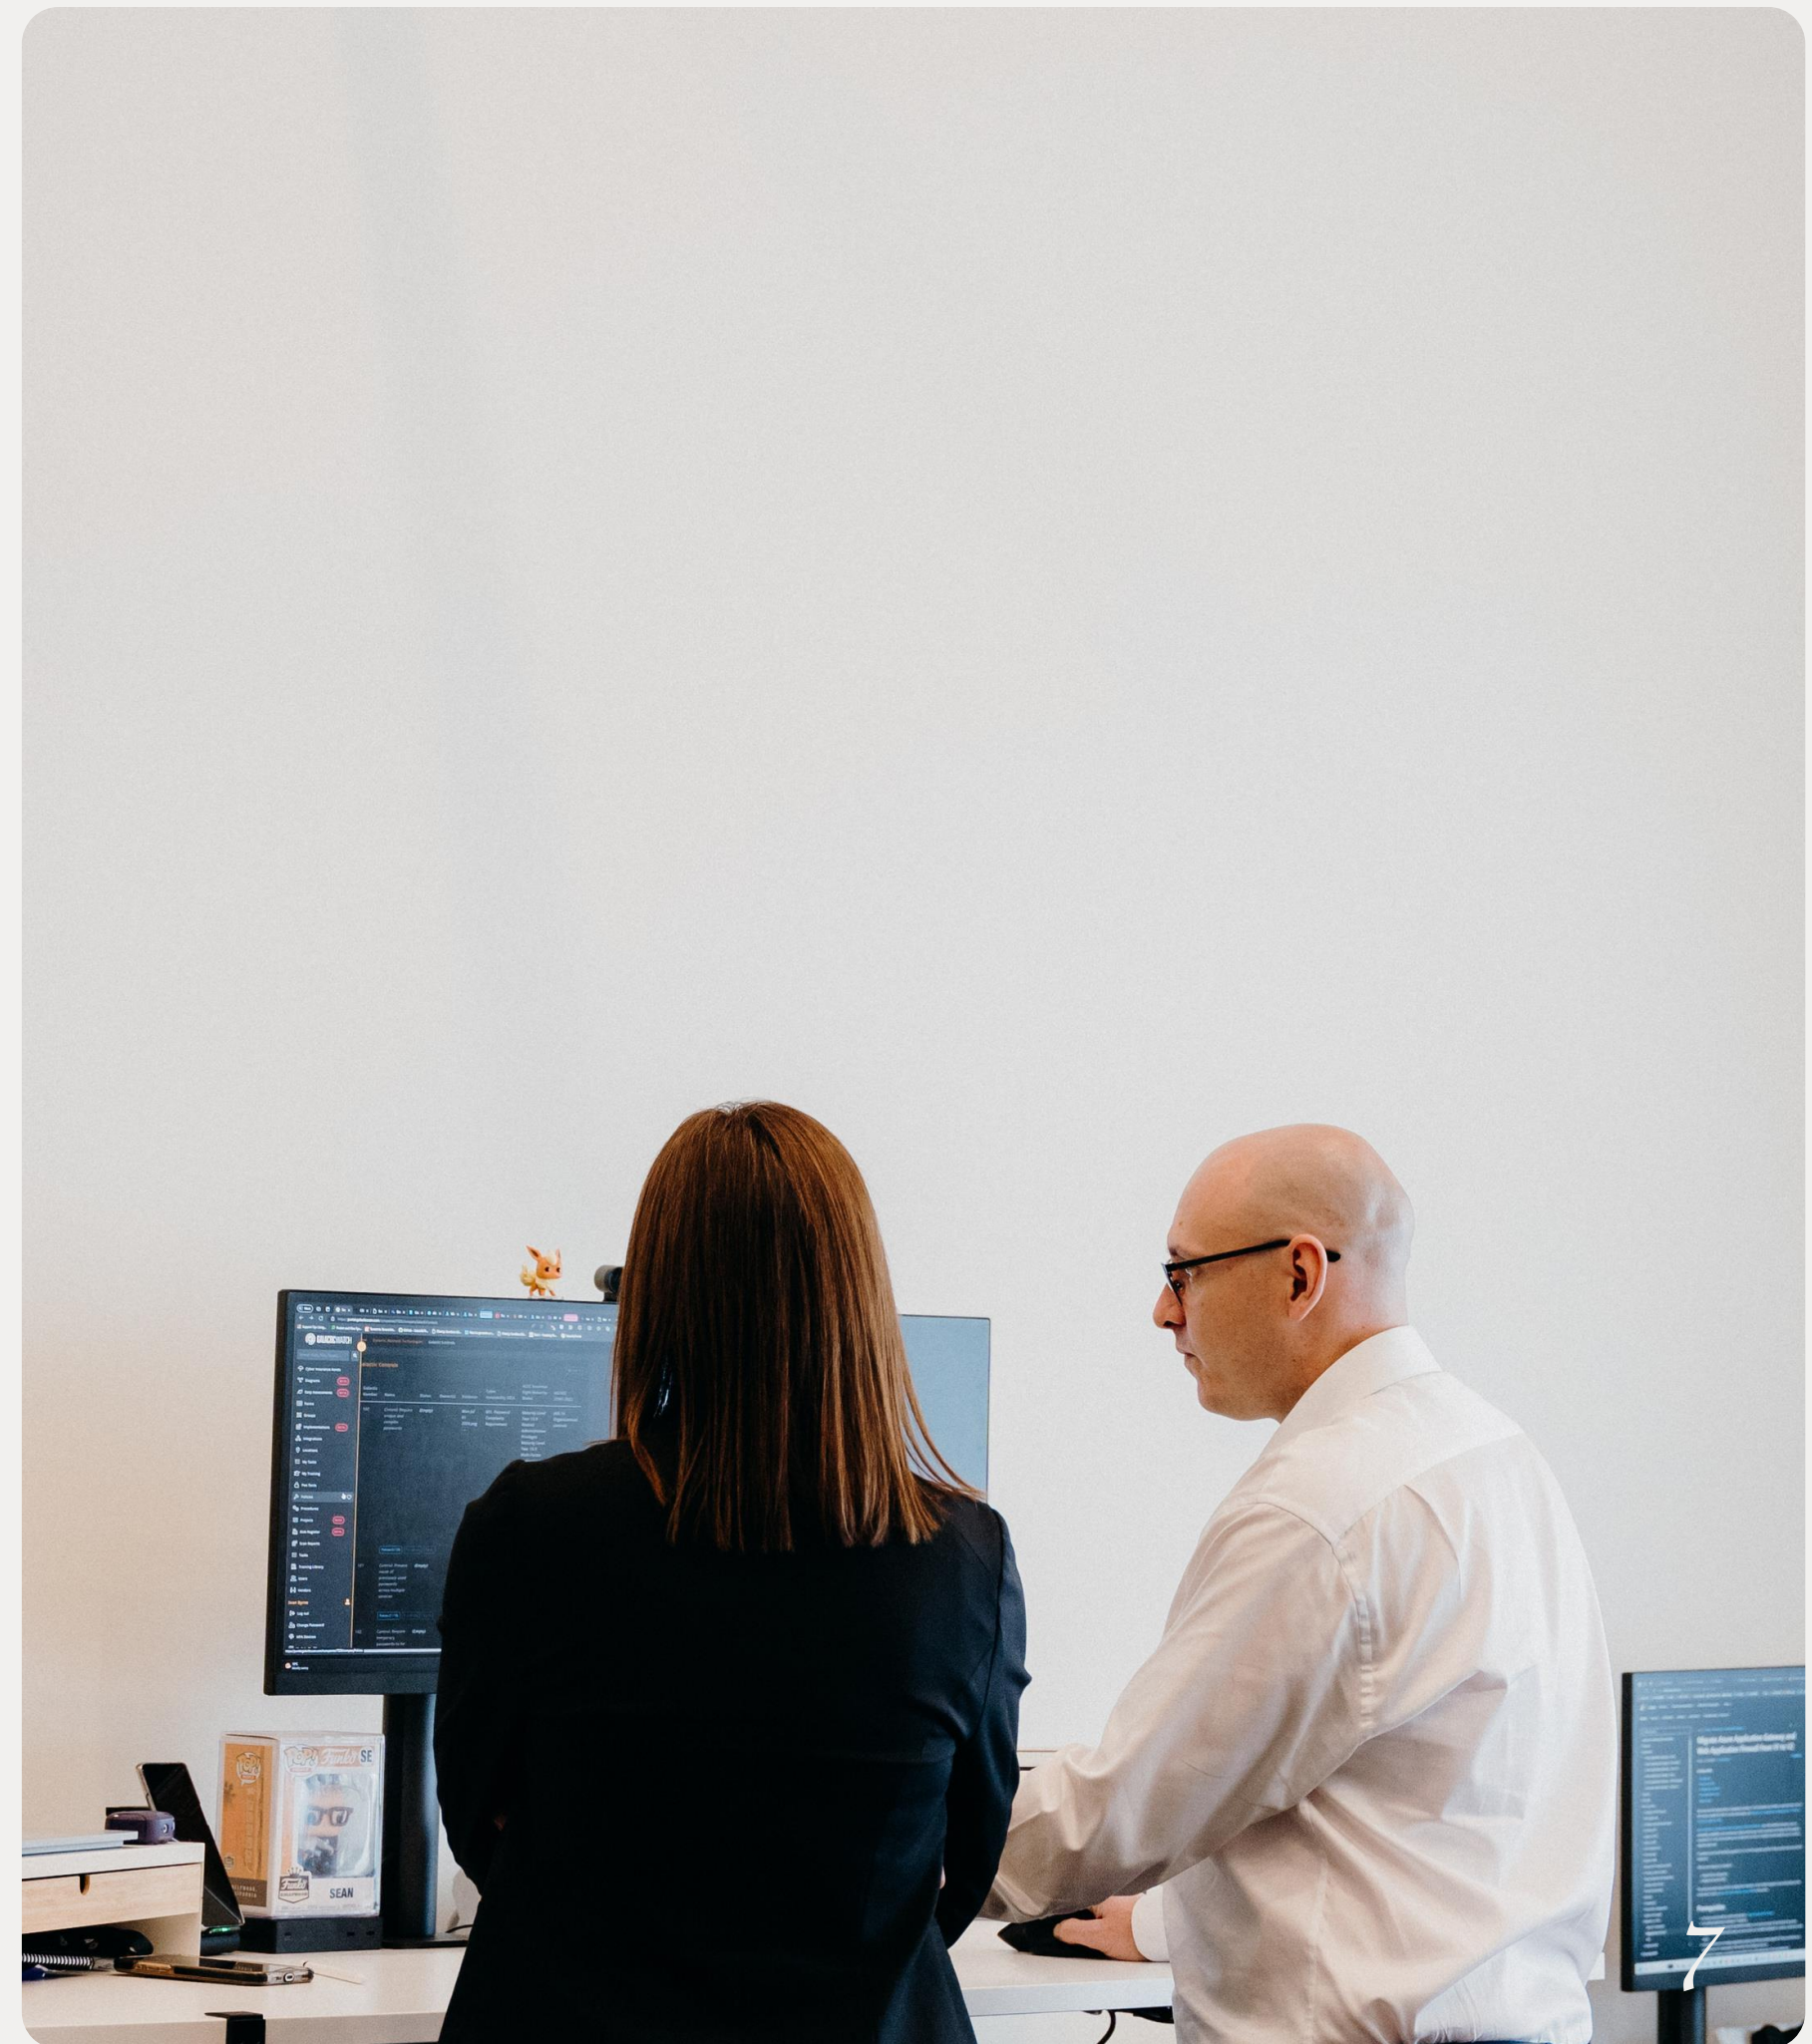

*Normally priced from \$1500 to \$5000.*

*Includes:*

- 15-minute call about your environment and assist with the application*
